Gaze / instrument position: timing and spatial correspondence
A Whole-task peak lag
A / L (n=11)
+195 [-49, +317] ms
A / R (n=11)
+341 [+268, +439] ms
C / L (n=11)
+195 [-122, +488] ms
C / R (n=11)
-171 [-268, -146] ms
−800 −600 −400 −200 0 200 400 600
Lag (ms); positive = gaze leads
B Paired task difference
PSM L (n=11)
+0 [-341, +341] ms
PSM R (n=11)
-512 [-683, -415] ms
−750 −500 −250 0 250 500
C minus A peak lag (ms)
C Spatial proximity (50 px)
A / L

Mean novice proximity (%)
Panels A/B share the timing scale. Points = group-curve peaks; bars = bootstrap 95% intervals. Trajectory timing does not establish fixation arrival at the same target.
